

Anthony Nelson

Full-Stack Engineer · Backend & Infrastructure

Mumbai, India · anthony@anthonymnelson.in · +91-8591537405 · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

ABOUT

I'm a backend-leaning full-stack engineer who's been building and shipping real products - not just side projects. I've single-handedly architected, deployed, and maintained a production MERN platform, built DNS infrastructure from scratch, containerized deployment pipelines, and automated everything from backups to CI/CD. I genuinely enjoy the infrastructure side of things as much as the code itself.

SKILLS

Languages: JavaScript, TypeScript, Python

Backend: Node.js, Express.js, REST APIs, MongoDB, SQL, Redis, BullMQ, JWT, RBAC

Infra & DevOps: Linux, Docker, Nginx, BIND9, DNS, GitHub Actions, Watchtower, Cloudflare Tunnel, Rclone

Frontend: React.js, Redux Toolkit, Tailwind CSS, HTML/CSS

Tools: Git, Postman, Puppeteer, VS Code

EXPERIENCE

Software Developer · [Ocellus Business & Services](#)

Mumbai | Apr 2026 – Present

- ▶ Only engineer on the team - built the entire internal MERN platform from scratch, including an admin panel with 20+ features that the whole company uses daily.
- ▶ Built an invoice generator with live preview using Puppeteer - auto-generates downloadable PDFs from live app data, completely replacing the old manual process.
- ▶ Containerized the full platform with Docker and deployed it on a bare Linux server via Cloudflare Tunnel (no exposed ports), keeping it live 24/7 without cloud hosting costs.
- ▶ Wired up JWT auth + RBAC across all endpoints, automated Rclone backups for disaster recovery, and set up a CI/CD pipeline with GitHub Actions + Watchtower - deploying is now just a git push.

PROJECTS

DnsTitle - [GitHub ↗](#) · Node.js · React · MongoDB · Redis · BIND9 · Docker · Nginx

- ▶ Built a full multi-tenant DNS management platform solo - automated domain verification, subdomain provisioning, and complete DNS record lifecycle management end-to-end.
- ▶ Workers handle BIND9 operations (add, update, delete records) asynchronously via Redis + BullMQ; failed jobs throw and get marked failed by BullMQ so nothing silently breaks.
- ▶ Nginx configured as a reverse proxy for scalable multi-tenant domain routing; API secured with JWT auth and rate limiting to prevent abuse.
- ▶ Fully Dockerized the platform - each service (API, worker, BIND9, Nginx, Redis) runs in its own container, making the setup portable and easy to spin up anywhere.

Hosting Platform - [GitHub ↗](#) · Node.js · Express · MongoDB · Docker · Dockerode

- ▶ Built a mini PaaS solo - automates app deployment and full container lifecycle (build, start, stop, restart, monitor) using Dockerode.
- ▶ MongoDB stores deployment metadata, container state, and per-user resource records; per-user container isolation keeps workloads secure and stable.
- ▶ Built continuous error logging for every container - catches and surfaces runtime errors in real time so deployment failures are never silent.

INTERSHIP

Backend Developer · [SIES College of Arts, Science and Commerce](#) Nerul, Navi Mumbai | Nov 2025 - Jan 2026

- ▶ Designed and built REST APIs in Python using FastAPI to serve as the data layer between the frontend and SQL database for an internal college platform.
- ▶ Implemented role-based access control (RBAC) to manage permissions across different user types within the system.
- ▶ Collaborated with a cross-functional team to gather requirements, align on API contracts, and deliver the backend on schedule.

EDUCATION

B.Sc. Information Technology · [SIES College \(Autonomous\)](#)

Navi Mumbai | Graduated 2026

GPA: 7.92/10 · 2nd Place, Inter-College Hackathon
