

Anthony Nelson

Full-Stack Engineer · Web GIS · Backend & Infrastructure

Mumbai, India · anthony@anthonymnelson.in · +91-8591537405 · [GitHub](#) · [LinkedIn](#) · [Portfolio](#)

ABOUT

I'm a full-stack engineer with a growing focus on Web GIS and geospatial applications. I've built and shipped real products, including a production MERN platform, a geofenced attendance management system, and a GIS application for camera location monitoring. My interests span full-stack development, infrastructure, and building practical applications with geospatial technology.

SKILLS

Languages: JavaScript, TypeScript, Python

Backend: Node.js, Express.js, REST APIs, MongoDB, SQL, Redis, JWT, RBAC

GIS & Mapping: ArcGIS Maps SDK for JavaScript, ArcGIS Online

Infra & DevOps: Linux, Docker, Nginx, DNS, GitHub Actions, Watchtower, Cloudflare Tunnel

Frontend: React.js, Tailwind CSS

Tools: Git, Postman, VS Code

EXPERIENCE

Software Developer · **Ocellus Business & Services**

Mumbai | Apr 2026 – Present

- ▶ Built the company's internal MERN platform from scratch as the sole engineer, including an admin panel with 20+ features used daily.
- ▶ Developed a remote PC management application enabling secure monitoring and control of office systems from remote locations.
- ▶ Developed a geofenced attendance management system for location-based employee attendance tracking.
- ▶ Developed a GIS application for monitoring and visualizing camera locations using interactive maps and geospatial data.
- ▶ Built an invoice generator with live preview using Puppeteer, replacing the previous manual process with automated PDF generation.
- ▶ Containerized and deployed the platform on a Linux server with Docker, automated backups and CI/CD using GitHub Actions + Watchtower, and implemented JWT authentication and RBAC.

PROJECTS

DnsTitle - [GitHub ↗](#) · Node.js · React · MongoDB · Redis · BIND9 · Docker · Nginx

- ▶ Built a full multi-tenant DNS management platform solo - automated domain verification, subdomain provisioning, and complete DNS record lifecycle management end-to-end.
- ▶ Workers handle BIND9 operations (add, update, delete records) asynchronously via Redis + BullMQ; failed jobs throw and get marked failed by BullMQ so nothing silently breaks.
- ▶ Nginx configured as a reverse proxy for scalable multi-tenant domain routing; API secured with JWT auth and rate limiting to prevent abuse.
- ▶ Fully Dockerized the platform - each service (API, worker, BIND9, Nginx, Redis) runs in its own container, making the setup portable and easy to spin up anywhere.

Hosting Platform - [GitHub ↗](#) · Node.js · Express · MongoDB · Docker · Dockerode

- ▶ Built a mini-PaaS which automates app deployment and full container lifecycle (build, start, stop, restart, monitor) using Dockerode.
- ▶ MongoDB stores deployment metadata, container state, and per-user resource records; per-user container isolation keeps workloads secure and stable.
- ▶ Built continuous error logging for every container - catches and surfaces runtime errors in real time so deployment failures are never silent.

INTERNSHIP

Backend Developer · **SIES College of Arts, Science and Commerce** Nerul, Navi Mumbai | Nov 2025 - Jan 2026

- ▶ Designed and built REST APIs in Python using FastAPI to serve as the data layer between the frontend and SQL database for an internal college platform.
- ▶ Implemented role-based access control (RBAC) to manage permissions across different user types within the system.
- ▶ Collaborated with a cross-functional team to gather requirements, align on API contracts, and deliver the backend on schedule.

EDUCATION

B.Sc. Information Technology · **SIES College (Autonomous)**

Navi Mumbai | Graduated 2026

GPA: 7.92/10 · 2nd Place, Inter-College Hackathon
